AKY9U

These combined indoor/outdoor units are easily installed through a window or wall to provide cooling or heating as and when required. A wide range of capacities is available to suit rooms of different sizes. Although compact, the large, high-pressure cross fan is mounted in a centre configuration and a lambda-type heat exchanger provides plenty of power. Fitted with a washable filter for easy maintenance, they are also extremely simple to install.

- Self-contained one-piece unit
- Vibration-free and effective
- Motorised louvres
- Cooling/heating
- Ultra-quiet
- Washable air filter
- Easy-to-use
- Quick and easy installation

### Easy filter cleaning

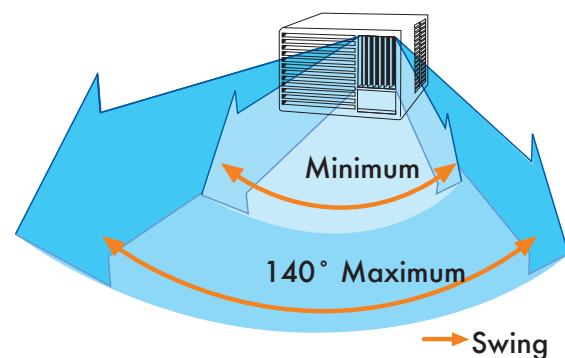

The filter can be cleaned without removing the front panel.

For AFY Models

### Flexible, directional airflow

With a centrally mounted louvre that allows airflow to be directed through a 140° horizontal range, window units ensure even distribution of warm and cool air throughout the room.
